

**What is claimed is:**

1. A notebook computer, comprising:

a main body with a cavity and a multimedia device;  
a multimedia controller, having at least one key to control the multimedia device, and connected to the main body, movable between a first position and a second position, wherein the multimedia controller is received in the cavity when the multimedia controller is in the first position, and the multimedia controller appears when the multimedia controller is in the second position.

2. The notebook computer as claimed in claim 1, wherein the multimedia controller is pivoted to a side surface of the notebook computer.

3. The notebook computer as claimed in claim 1, wherein the main body has a switch, and when the switch is pressed, the multimedia controller is moved from the first position to the second position.

4. The notebook computer as claimed in claim 3, wherein the multimedia controller has a second magnet, the switch includes a rod portion with a first magnet at the tip thereof, by which the multimedia controller is attracted, remaining in the first position in the cavity when the switch is not pressed.

5. The notebook computer as claimed in claim 4, wherein the rod portion is shifted by a predetermined

3 distance when the switch is pressed, and the multimedia  
4 controller is pushed out by the repulsive magnetic force  
5 between the first magnet and the second magnet.

1 6. The notebook computer as claimed in claim 1,  
2 wherein the multimedia controller has an LCD module.

1 7. The notebook computer as claimed in claim 1,  
2 further comprising a monitor pivoted to the main body and  
3 a handle connected to the main body at the side closed to  
4 the monitor.

1 8. The notebook computer as claimed in claim 7,  
2 wherein the handle is pivoted to the main body and  
3 movable between a first angle and a second angle.

1 9. The notebook computer as claimed in claim 8,  
2 wherein when the handle is fixed at the first angle, the  
3 handle protrudes downward from the main body, changing  
4 the inclined angle thereof.

1 10. The notebook computer as claimed in claim 1,  
2 wherein the multimedia device is a disc driver.

1 11. A notebook computer, comprising:  
2 a main body having a multimedia device;  
3 a monitor, pivoted to the main body;  
4 a multimedia controller, having at least one key to  
5 control the multimedia device and connected to  
6 the main body at the opposite side of the  
7 monitor, movable between a first position and a  
8 second position.

1           12. The notebook computer as claimed in claim 11,  
2 wherein the main body has a cavity at the opposite side  
3 of the monitor, the multimedia controller is received in  
4 the cavity when the multimedia controller is in the first  
5 position, and the multimedia controller appears when the  
6 multimedia controller is in the second position.

1           13. The notebook computer as claimed in claim 11,  
2 wherein the multimedia controller is pivoted to a side  
3 surface of the main body.

1           14. The notebook computer as claimed in claim 11,  
2 wherein the main body has a switch, and when the switch  
3 is pressed, the multimedia controller is moved from the  
4 first position to the second position.

1           15. The notebook computer as claimed in claim 14,  
2 wherein the multimedia controller has a second magnet,  
3 the switch includes a rod portion with a first magnet at  
4 the tip thereof, by which the multimedia controller is  
5 attracted, remaining in the first position in the cavity  
6 when the switch is not pressed.

1           16. The notebook computer as claimed in claim 15,  
2 wherein the rod portion is shifted by a predetermined  
3 distance when the switch is pressed, and the multimedia  
4 controller is pushed out by the repulsive magnetic force  
5 between the first magnet and the second magnet.

1           17. The notebook computer as claimed in claim 11,  
2 wherein the multimedia controller has an LCD module.

1           18. The notebook computer as claimed in claim 11,  
2 further comprising a handle connected to the main body at  
3 the side closed to the monitor.

1           19. The notebook computer as claimed in claim 18,  
2 wherein the handle is pivoted to the main body and  
3 movable between a first angle and a second angle.

1           20. The notebook computer as claimed in claim 19,  
2 wherein when the handle is fixed at the first angle, the  
3 handle protrudes downward from the main body, changing  
4 the inclined angle thereof.

1           21. The notebook computer as claimed in claim 11,  
2 wherein the multimedia device is a disc driver.
